Design Thinking for Educators

2nd Edition
How might my classroom be redesigned to better meet my students’ needs?

Michael Schurr, a 2nd grade teacher in New York, realized that he never asked his students what would make them comfortable in the classroom. He decided to talk directly with his students to figure out the best design for their environment.

Based on his students’ input, he was able to redesign his classroom to better address the needs and desires of his students. He lowered the bulletin boards so that his students could actually see the content he’d spent hours assembling, and created a more comfortable semi-private space for the students to study by rethinking the student cubby space. His students are more engaged and move more fluidly in the classroom space. Now Michael consistently engages his students in helping him more effectively shape their learning experience.

Michael is using design to re-imagine his classroom through the lens of his students’ eyes.
How might we create a 21st century learning experience at our school?

The faculty at Ormondale Elementary School in California wondered if they were preparing their students well for the future. They decided it was time to collaboratively design an approach to teaching and learning that they felt was updated and relevant for the 21st century.

Collectively, they embarked on a design journey and came to an approach they call “Investigative Learning,” which addresses students not as receivers of information, but as shapers of knowledge. The faculty continues to evolve and share this approach with new teachers through the creation of a *Manual of Investigative Learning* to keep track of their philosophy and methods. They have gained support from their school board, and have become recognized as a California Distinguished School.

The faculty at Ormondale Elementary School uses design to address the needs of their evolving student body.

*School-designed*
How might we redesign our approach to curriculum development and delivery to center around the needs and desires of our teachers and students?

With a movement toward student-centered and personalized instruction, the Howard County Public School System in Maryland is using Design Thinking to tackle next generation curriculum redesign incorporating 21st Century skills. Currently, there is a disconnect between the existing paper-based curriculum and the interactive digital resources that are now available anytime, anywhere for teachers and students.

Tapping into teacher, parent, and student behaviors in and outside of school, the design team collected inspiration around the ways that people engage with information and interact with curricular materials. Understanding the desires of teachers, students, parents and administrators has helped the team rethink curriculum delivery as well as develop resources to replace, augment, and enhance current curriculum documents.

Howard County is using design to re-conceptualize curriculum creation and delivery to meet the needs of all learners.
How might we redesign our high school to elevate student engagement and academic outcomes?

Consistent low student achievement results at Castle High School in Hawaii demonstrated the need for a redesign and restructure of the school. Design Thinking Hawaii, a non-profit organization that engages volunteers to apply Design Thinking to big challenges, partnered with the Hawaii Department of Education to reimagine the Castle High experience.

Through a series of mini-charettes, Design Thinking Hawaii has collected the needs and interests of learners, teachers, and families and engaged the larger community to imagine new solutions that could help the school be more effective. The adopted plan captured the community’s priorities in new content and structures, and Complex Area Superintendent Lea Albert is enabling the school and community to prototype and iterate core curriculum, character education, and support services. This is the first public-school model in Hawaii to co-design its offerings with community, targeting systemic educational problems.

**Design Thinking Hawaii is using design to provide the state with input that will shape the redesign of Castle High and other schools in the community.**
“Students just aren’t interested in learning about fractions.”

“There is no teacher community network.”

“The pick-up and drop-off process at school is a nightmare.”

“Communication with parents isn’t effective.”

“The school pick-up and drop off process is chaos.”

“I just can’t get my students to pay attention.”

“The classroom organization doesn’t accommodate different learning modes and shifting class sizes.”

“Effectively managing multiple learning-levels in one classroom feels impossible.”

“Current communication between administration and teachers doesn’t give everyone a voice.”

There are a lot of problems in education today... but each of these concerns can be seen as an opportunity for you to design new, improved solutions for your classrooms, schools and communities.
The needs of today’s learners are evolving as rapidly as the technologies that compete for their attentions. At the same time, our organizations and systems are stretched to their limits to keep up with the changing demands of the times. As an educator, you are distinctly positioned to keep a pulse on students’ evolving needs... making you uniquely qualified to understand and design for the changing needs of our schools. With over 3 million teachers in the US alone, and with a vast international network of enthusiastic educators, you stand in force on the front-lines of K-12 education. Existing school processes and curriculum are structured to address district and state wide needs, but every school is different.

But, because you understand your students and your school like no one else, it is your opportunity—and your responsibility—to create solutions for the challenges you and your school face everyday. As Einstein famously said, “We can’t solve problems by using the same kind of thinking we used when we created them.”

Wherever they fall on the spectrum of scale—from an interaction with a student to engaging parents to managing your schedule to developing whole new approaches to system-wide reform—the challenges facing educators are real, complex, and varied. And they need new answers. As such, they require new perspectives, new tools, and new approaches.

**Design Thinking is one of these approaches.**

"Students come to school hungry and can’t focus on the work."

"The assessment rubric doesn’t accurately represent learning."

"I feel so alone in my work."

"Parents don’t support home learning."

"We’re not preparing our kids adequately for the future."

"District-wide changes don’t authentically accommodate differing communities."

"School schedules don’t align with teaching and learning rhythms."

"The assessment rubric doesn’t accurately represent learning."
I have seen teachers start to redesign their classroom spaces by interviewing their students...and develop new curricula by brainstorming and then prototyping out a unit...The fact that teachers are using human-centered design techniques to understand their students better makes students feel more engaged in the changing learning environment.

The fact that the teacher is becoming the designer of his or her own classroom experience professionalizes the role of the teacher and allows for the most valuable change—authentic change driven by the students’ needs rather than a school or district mandate.

Design thinking is a creative act and lets teachers understand that the act of creating a really effective learning environment is an art that is both reflective and intentional. If we want to change education and learning to make it more relevant, more effective and more enjoyable for all involved, teachers need to be the entrepreneurial designers and redesigners of the “systems” of schools and of the schools themselves.

Dominic, Head of School

This toolkit is for you.

This toolkit can help you create solutions for everyday challenges.

The toolkit offers you new ways to be intentional and collaborative when you are designing new solutions for your classroom, school, and community. It hones your skills and empowers you to create desirable solutions. In this toolkit, we have laid out a series of steps that can help you develop new, innovative solutions designed with people at the center.

This toolkit equips you with the process and methods of design so you can be more intentional about facing and solving for your current challenges. Businesses, social entrepreneurs and other innovators have used these methods for decades to create solutions for many different types of challenges.

As educators, you are already designing every single day—whether it’s finding new ways to teach content more effectively, using your classroom space differently, developing new approaches to connecting with parents, or creating new solutions for your school.

We know that your time is precious and demands are high, and it may often feel that the system in which you educate is not as nimble as necessary to keep up with the rapidly evolving demands. However, you already possess the skills to solve for these kinds of challenges.

The methods in this toolkit are adapted specifically for you and give you the flexibility to work within your existing constraints.

This is an invitation to experiment with design processes. Let it inspire you to approach challenges differently and experience how Design Thinking adds a new perspective to your work.
What is Design Thinking?

Design Thinking is a mindset.

Design thinking is about believing we can make a difference, and having an intentional process in order to get to new, relevant solutions that create positive impact.

Design Thinking gives you faith in your creative abilities and a process for transforming difficult challenges into opportunities for design.

It’s Human-Centered. Design Thinking begins from deep empathy and understanding of needs and motivations of people—in this case, the students, teachers, parents, staff and administrators who make up your everyday world.

It’s Collaborative. Several great minds are always stronger when solving a challenge than just one. Design Thinking benefits greatly from the views of multiple perspectives, and others’ creativity bolstering your own.

It’s Optimistic. Design Thinking is the fundamental belief that we all can create change—no matter how big a problem, how little time or how small a budget. No matter what constraints exist around you, designing can be an enjoyable process.

It’s Experimental. Design Thinking gives you permission to fail and to learn from your mistakes, because you come up with new ideas, get feedback on them, then iterate. Given the range of needs your students have, your work will never be finished or “solved.” It is always in progress. Yet there is an underlying expectation that educators must strive for perfection, that they may not make mistakes, that they should always be flawless role models. This kind of expectation makes it hard to take risks. It limits the possibilities to create more radical change. But educators need to experiment, too, and Design Thinking is all about learning by doing.

In short, Design Thinking is the confidence that new, better things are possible and that you can make them happen. And that kind of optimism is well-needed in education.
What can I use Design Thinking for?

You can use Design Thinking to approach any challenge.

However, there are a consistent set of challenges that teachers and schools seem to face, and they center around the design and development of learning experiences (curriculum), learning environments (spaces), school programs and experiences (processes and tools), and system strategies, goals and policies (systems).

Sometimes these challenges are tackled by a district team—especially for the more complex challenges that involve multiple stakeholders; sometimes challenges are addressed at the school level, with a core team of representative educators driving the process; and sometimes these challenges are addressed by educators or small teams of educators themselves... which is where grassroots change begins to happen.

What can I use Design Thinking for?

You can use Design Thinking to approach any challenge.

However, there are a consistent set of challenges that teachers and schools seem to face, and they center around the design and development of learning experiences (curriculum), learning environments (spaces), school programs and experiences (processes and tools), and system strategies, goals and policies (systems).

Sometimes these challenges are tackled by a district team—especially for the more complex challenges that involve multiple stakeholders; sometimes challenges are addressed at the school level, with a core team of representative educators driving the process; and sometimes these challenges are addressed by educators or small teams of educators themselves... which is where grassroots change begins to happen.

How might I inspire students to engage in concerns of the environment?

How might I engage my students in compelling ways around learning world history?

How might I develop students to be active seekers of knowledge in subjects that they have little knowledge of?

How might I help children from disadvantaged backgrounds increase their vocabulary?

How might I use my classroom space in different ways to help set my students at ease?

How might I create a comfortable space that meets the many needs my students have throughout the day?

How might we reimagine our school’s library for the needs and interests of today’s learner?

How might we create an exciting and effective space for teachers to collaborate?

How might we design our high school campus to best engage and support today’s learner?

How might I engage parents as an integrated part of their students’ learning experience?

How might we recruit the best teachers to our school?

How might we re-envision arrival and departure procedures at our school?

How might we design ways to keep ourselves balanced and well?

How might we redesign our school schedule to be centered around the needs of today’s families and teachers?

How might we reinvision curriculum for an entire district while providing for individual schools’ differences?

How might we track the development of students’ character traits over time to help shape our school philosophy more intentionally?

How might we connect more with our neighborhood community?

How might we use our school as an R&D hub for schools nationwide?
What does Design Thinking look like in action?

How Ormondale Elementary School redesigned their approach to teaching and learning

DISCOVERY
A 2-day summer workshop kicked off the challenge, with an exercise which entailed teachers imagining one of their current students in the year 2060. Based on understanding the goals and dreams of their students and families, coupled with the books they read about 21st century skills, the teachers collectively discussed the skills necessary for the students to succeed in the future. For further inspiration, the group visited outside organizations facing analogous challenges.

INTERPRETATION
The group synthesized the research creating generative questions, such as “How might we enable the globally aware student?” and “How might we provide opportunities for interest-driven learning?”

IDEATION
Initial brainstorm ideas included tools and classroom design and expanded to include curriculum and the educational system as a whole.

EXPERIMENTATION
Several brainstorm ideas were prototyped which resulted in the emergence of a pattern across all the prototypes: the team was passionate about a teaching and learning approach they called Investigative Learning. The approach addressed the students not as receivers of information but as shapers of knowledge. They developed short- and long-term plans for ideas they could try out, and the things they’d like to learn more about in order to continually build out this new approach over the school year.

EVOLUTION
Over the course of a year, many solutions were tested including diverse approaches to curriculum that integrated project- and theme-based learning in the classroom. The teachers created new communications for parents, and one teacher even received a grant to renovate a classroom and create a different learning environment for her students. Dedicated time in their weekly meetings was set aside to discuss what was happening and support and learn from each other.

In the second year, the evolution continued with another workshop to make sense of the experiments they had conducted around the school. They developed a framework for Investigative Learning experiences that integrated everyone’s approaches, created commonly shared standards unique to their school that built upon state standards, and created new assessment approaches. They created a “Manual of Investigative Learning” to help everyone have a shared reference and have become recognized as a “California Distinguished School.”
The Design Process

The design process is what puts Design Thinking into action. It’s a structured approach to generating and evolving ideas. It has five phases that help navigate the development from identifying a design challenge to finding and building a solution.

It’s a deeply human approach that relies on your ability to be intuitive, to interpret what you observe and to develop ideas that are emotionally meaningful to those you are designing for—all skills you are well versed in as an educator.

Methods are the core piece of this toolkit: they offer the actual instructions that help you put Design Thinking into action.

There are many, in order to provide you with a rich variety to choose from: every challenge requires a different approach and a different set of methods.

It often makes a lot of sense to follow these steps in a linear way, especially when you’re starting out. But don’t feel restricted by that: only you know how to best use this toolkit. Use it along with other methodologies and theories you find useful to develop ideas. Adapt it, annotate it, cut it up, reconstruct it and make it your own.
The Design Thinking process oscillates between divergent and convergent thinking modes. It can be helpful to be aware of the mode that corresponds to the design phase you are working through.
If you only remember a few things...

**You are a designer.**

Become more intentional about your design process.

Be confident in your creative abilities.

Be strategic about what needs attention first.

Listen to your stakeholders and be inspired to design for them.

It’s your opportunity, and your responsibility, to have an impact on the lives of your students and be part of changing and growing the system.

**Embrace your beginner’s mind.**

Approach problems as a novice even if you already know a lot about them.

Let yourself learn.

Be willing to experiment.

Be ok with not having the “right” answer.

Trust that you’ll find one.

**Stepping out of your zone of comfort = learning.**

Get unstuck.

Break your routine.

Use the world outside your classroom to invigorate your work.

Analogous inspiration is your best friend.

Leave your classroom.

Collaborate with others.

**Problems are just opportunities for design in disguise.**

Have an abundance mentality.

Be optimistic.

Believe the future will be better.

Start with, “What if?” instead of “What’s wrong?”
The design process has helped me see that I have a responsibility to be a change agent for teaching and learning. I don’t need to have all the answers (or be perfect), but I need to be willing to try new things, dare to dream big, and be patient as I experiment with the designs that emerge in the process. Design Thinking has given me the tools and empowerment to create meaningful educational change.

—Meg Krause, 5th Grade teacher
Getting Started

WHAT’S IN THIS SECTION

Define a Challenge 19
Create a Project Plan 21
**Define a Challenge**

Every design process begins with a specific and intentional problem to address; this is called a design challenge. A challenge should be approachable, understandable and actionable, and it should be clearly scoped—not too big or too small, not too vague or too simple.

**List possible topics**
Finding opportunities for design often comes from noticing problems. An experienced Design Thinker maintains a mindset which instinctively reframes problems into opportunities. Make a list of all the problems you’ve noticed or things you’ve wished for.

**Frame the problem**
Rewrite the problem statements into “how might we” questions in order to frame the problem as a possibility. Use the define a challenge worksheet to help create a “how might we” question.

**Keep it simple.**
Describe your challenge simply and optimistically. Make it broad enough to allow you to discover areas of unexpected value, and narrow enough to make the topic manageable.

**Sketch out end goals**
Define your goals for undertaking this design challenge. Be honest about determining a realistic scope of your project both regarding time and output. What will you work to produce? Where do you expect to get at the end of this process?

If you are creating a solution for your classroom, it may be something that will be easy for you to try and implement. But sometimes you are creating something that is beyond your direct skills, or something that involves many other people—such as defining new attributes for your school library, or designing new processes for school drop off. In this case you might want to end with creating a presentation or a “pitch” to help engage others in your design ideas. Before you dig into the specifics of your challenge, consider what might be the “deliverables” for this project.

**Define measures of success**
What else are you working toward? What will make this work successful? What are the measures of success? Examples include number of people who sign up for your program, stories retold by parents, student excitement, etc. Most of the time, these measures of success emerge as you dig into your project, but it helps to start to think about this at the onset.

**Establish constraints**
It is crucial to define constraints and get specific on the problem or question you are trying to address. Does it need to fit into a certain timeframe? Can it be integrated with an existing structure or initiative? Make a list of the constraints you need to manage.

**Write a brief**
A clearly defined challenge will guide your questions and help you stay on track throughout the process. Write a short brief that clarifies the challenge you plan to address. Write it as if you were handing it to someone else to design with. Capture thoughts on why this is a problem, and what the opportunity for design will be.

**Worksheet 1: Define a Challenge**

Use the define a challenge worksheet in the Designer’s Workbook or in the appendix to help you define a challenge you’re excited to tackle and to create a project plan to guide the project.
A design challenge is the starting point of every design process, and the purpose you will work toward. Framing the right “How might we” question to address your challenge is essential. The question should be broad enough to allow for unexpected possibilities but narrow enough to let you focus. Be careful not to include the answer in the question. Here are a few examples you can choose from, or use as inspiration to come up with a challenge that matters for you.

**CURRICULUM**
- How might we engage students more deeply in reading?
- How might we bring the “real” Chinese community to my Chinese classes, and enable my students to make more authentic connections to the Chinese World?
- How might we create a curriculum that teaches students about the brain and about who they are as learners?

**SPACE**
- How might we design our classroom space to be student-centered?
- How might we create a space for teacher collaboration?
- How might we redesign the library to enable flexibility between loud collaborative and quiet contemplative uses?

**PROCESSES AND TOOLS**
- How might we build school-family partnerships?
- How might we adapt the school schedule to the learning rhythms of our students?
- How might we create a way to systematically review, discuss, and support students at lower grade levels?

**SYSTEMS**
- How might we develop tools that help teachers collaborate across our district’s schools?
- How might we support a more well-rested campus?
- How might we design our campus to serve our students and the community?
Create a Project Plan

Once you have decided which challenge to work on, you can start to plan your design project. The first, and likely quite challenging, task will be to find the time for your endeavor. Try to integrate Design Thinking into the existing structures of your school’s schedule. That will make it easier to follow through.

You know your workplace, schedule, and priorities best. You can create your own plan that best fits into your unique configuration. Here are a few starting points for you.

**Do it in a day**

Transform a professional development day into a collaborative design workshop. To make the most of the day, define a challenge, assemble a team and identify sources of inspiration ahead of time. The large amount of time set aside for a PD day is ideal for working through Interpretation, Ideation, and Experimentation. These are intense and productive phases of the process, and will leave the team with tangible ideas as evidence of your progress. A professional development day is also an ideal chance to go out into the world and seek inspiration.

Doing a challenge in a day often results in inspiring new ideas, but doesn’t allow you the benefit of trying the ideas out in order to learn more about them. Consider spending time at the end of the day inviting teams of teachers to commit to experimenting and evolving ideas after this day, and share back learnings during some of your meetings over the year.

**Immerse over a week or two.**

Commit time during a prolonged break, such as summer, or holiday break, to dive into the design process. A continuous period of time allows for a deeper engagement with each phase. It’s an opportunity to experience the progression between steps. During the rest of the year, you can draw on what you learned during this time. It is amazing how far you can get in a short amount of dedicated time.
Decide what challenge is appropriate for a year-long commitment. Consider multiple factors, such as complexity, scope, peoples’ involvement and priority. Then make a project calendar and commit to deadlines and goals, as they create a sense of progress. Agree on regular check-ins to keep the momentum going. Be intentional about how best to match the flow of the project to the flow of the school year.

**Design with depth over time** Spread it out in small increments over months. Claim a common prep period or an after school meeting for working on a design project. Use the methods in this toolkit to determine the agenda each week. Meet regularly to build momentum, and provide opportunities for individual work and reflection on the days in between.
Prepare Before You Start

Before you begin, here are a few tips that will help you make the most out of your experience.

TEAMS.
The team is stronger than any individual—you know this well as a guiding principle of education. And collaboration is inherent to Design Thinking: having a team of people who offer different strengths and perspectives will enable you to solve complex challenges. But teamwork isn’t always easy. Team dynamics can be as limiting as they are empowering. Here’s how to build a great team:

START SMALL.
A team will work best if it consists of a core group of two to five individuals. The smaller size will make it easier to coordinate schedules and make decisions. Invite others to join for brainstorming, give feedback or help you get unstuck when it’s most useful.

INVITE VARIETY.
Select people who can contribute from different angles. Consider involving an administrator, or a teacher you have never worked with. You’ll have a better chance of coming up with unexpected solutions.

ASSIGN ROLES.
It helps everyone navigate the project if there is a clear understanding of what to contribute to the team. This is particularly useful when you can’t choose who to work with: make agreements about which responsibilities people can take on that brings out their strengths. Who will be the coordinator, keeping everything organized? Who will be the enthusiast, inspiring the team with big dreams? Who is the nagger, making sure things keep moving forward? Who will lead the team?

ALLOW FOR ALONE TIME.
While most of this work should be done as a team, make sure to allow for individual work time. Sometimes the best progress comes from solitary thinking, planning and creating.

SPACES.
A dedicated space, even if it’s just a wall, gives the team a physical reminder of their work. It allows them to put up inspiring imagery or notes from their research and to be continuously immersed in their learnings. Shared visual reminders help track the progress of the project and stay focused on the challenge.

To spark new ideas and get unstuck when the work gets more challenging, consider changing the space from time to time.

MATERIALS.
This process is visual, tactile and experiential. You often will create an overview that’s visible for everyone on the team, or come up with a quick sketch to explain your idea. Make sure you have supplies on hand that make it easy to work in that fashion.

Most of the methods require Post-it Notes, large Post-it pads or a flipchart and felt markers.

OTHER SUPPLIES THAT WILL BE USEFUL ARE:

- Adhesives
- Construction paper
- Foam core boards
- Markers
- Scissors
- Digital cameras
- Video cameras
Phase 1

Discovery

WHERE YOU ARE IN THE PROCESS

WHAT'S IN THIS PHASE

1.1 Understand the Challenge 26
1.2 Prepare Research 29
1.3 Gather Inspiration 33
Discovery builds a solid foundation for your ideas. Creating meaningful solutions for students, parents, teachers, colleagues and administrators begins with a deep understanding for their needs. Discovery means opening up to new opportunities, and getting inspired to create new ideas. With the right preparation, this can be eye-opening and will give you a good understanding of your design challenge.
Phase-Step
1-1

Understand the Challenge

Review the Challenge
Share What you Know
Build your Team
Define your Audience
Refine your Plan

WORKSHEET
Worksheets for this step are available on pages 16-19 of the Designer's Workbook to help you understand the challenge with your team.

Review the Challenge

A clearly defined challenge will guide your questions and help you stay on track throughout the process. Spend time with your team to create a common understanding of what you are working toward.

Collect thoughts
As a team, talk about the design challenge you chose to work on. Collect and write down thoughts about your challenge. Start with a broad view: ask yourself why people might need, want, or engage with the topic you are investigating. Discuss how you can refine the challenge if it feels too broad, or too specific.

Reframe the challenge
Based on the thoughts you have collected, reframe the challenge, if necessary, to incorporate the team's thinking. Keep rewriting your challenge until it feels approachable, understandable and actionable to everyone on the team.

Create a visible reminder
Post the challenge in a place that everyone on the team can see, to be reminded of your focus throughout the process.

THIS GETS YOU
A clear, agreed upon, design challenge expressed in one sentence.

KEEP IN MIND
A good challenge is phrased with a sense of possibility. Make it broad enough to allow you to discover areas of unexpected value, and narrow enough to make the topic manageable.
**Share What you Know**

Chances are good that you already have some knowledge about the topic. Share what you know, so you can build on it and can focus on discovering what you don’t yet know.

**Share what you know**

Post the design challenge where everyone can see it. With your team, write down what you know about the topic. Use one piece of information per Post-it Note. Read your notes out loud, and post them under the design challenge. Ask others for feedback and discuss any of the assumptions that come up.

**Define what you don’t know**

Write down and share what you don’t know or yet understand about the challenge. Post these questions in a different area.

**Build on your knowledge and fill in the gaps**

Group the Post-it Notes into themes and use them to plan your research in later steps.

---

**Build your Team**

Several great minds are always stronger when solving a challenge. Put effort into understanding the skills and motivations of your collaborators to create a strong team.

**Share who you are**

Spend time as a team getting to know each other. Make this a casual and friendly experience. Give everyone a few minutes to write down his or her skills, then share back with the team.

**Define your individual and team goals**

Talk about the ambitions of each person. Continue to write them down and post them on the wall. Find out about your shared goals. Match skills and passions with what your challenge requires.

**Agree on roles**

Define each person’s role. Consider letting your team members self-identify how they want to contribute. Keep a visual reminder of your conversations by taking notes or photos.

**Give feedback**

Revisit the agreement about your team structure on a regular basis. Support each other by giving constructive feedback about everyone’s contribution.
Define your Audience

A deep understanding of peoples’ motivations and needs is the best foundation for any design solution. Consider the broad spectrum of people who will be touched by what you design.

List immediate contacts
With your team, collect and write down the people or groups that are directly involved in or reached by your topic. Are you designing for parents? Will you need to connect with administrators? Use Post-it Notes, so you can adapt your overview throughout the conversation.

Think more broadly
Add people or groups who are peripherally relevant, or are associated with your direct audience.

Build an overview
Think about the connections these people have with your topic. Who are the fans? Who are the skeptics? Who do you need the most? Create a visual overview of those who you consider to be your main audience, as opposed to more peripheral contacts.

Create a visible reminder
Keep a map of the people involved in a visible place for you to revisit over the course of the project.

Refine your Plan

A solid plan will help you make decisions along the way. You began with a plan for the project, connect with your team around goals and deadline to make sure everyone is aligned. Make agreements so everyone on the team can organize their time effectively.

Sketch a calendar
Sketch out a large paper calendar that everyone can see. Write down tasks, meetings and finish dates on Post-it Notes, then affix them to the paper calendar to allow for mobility.

Form agreements
As a team, define which times you can best collaborate. Put these dates on everyone’s calendars.

Create a visual reminder
Keep your paper calendar in a space visible for everyone to see, or create a shared online document with access for all team members.

This project calendar includes a plan for stepping through the design phases as well as major check-in dates and deadlines.

**Phase-Step 1-2**

**Prepare Research**

Identify Sources of Inspiration
Select Research Participants
Build a Question Guide
Prepare For Fieldwork

**WORKSHEET**

Worksheets for this step are available on pages 20-29 of the Designer's Workbook to help you prepare research with your team.

---

**Identify Sources of Inspiration**

Inspiration is the fuel for your ideas. Plan activities to learn from multiple peoples’ perspectives and explore unfamiliar contexts.

**Imagine interesting people to meet**

Draw a map of all the people involved in your topic. Think of characteristics that would make them interesting to meet. As a team, choose who you want to learn from. Plan how to get in contact with them.

**Think of extremes**

Consider meeting people who represent “extremes” people that are either completely familiar with and involved in your topic, or don’t have anything to do with it. Extreme participants will help you understand unarticulated behaviors, desires, and needs of the rest of the population that they feel or express more powerfully than others.

**Make a list of activities you want to do**

Choose which activities will best help you learn and get inspired (find more information about each activity on the respective method pages):

- Learn from users
- Learn from experts
- Learn from peers observing peers
- Learn from peoples’ self-documentation
- Immerse yourself in context
- Seek inspiration in analogous settings

Encourage people to tell you their whole story and avoid yes/no questions.
EXAMPLE
A team from Riverdale Country School was looking to design new ways for teachers to collaborate. They decided to visit analogous settings where collaboration happens, and considered some pretty interesting inspiration - a fire station, a corporate office, and a design studio. While visiting the corporate office, they learned that the office staff prepare for meetings by sending out an agenda in advance. This way, everyone is prepared for the meeting. Gathering many other nuggets of inspiration, this specific story stood out to them, given that their faculty meetings typically began with a discussion of the agenda, and that ended up taking much of the limited time they had together. They decided immediately to try this idea in their school.

Select Research Participants

People are often your most valuable source of inspiration. Imagine specific characteristics of the people you would like to meet. This will help you navigate the process of finding and engaging with interesting individuals.

Describe the people you want to meet
Create specific descriptions of the people you want to engage with. Picture the characteristics of people you are looking for. Do you need to speak with a quiet child? Is it a very dedicated administrator you are looking for? Could you learn the most from someone who just started their career? Make sure you also cover a variety of gender, experience, ethnicity, etc. Work as a team and build a visual overview of your thoughts, using a large piece of paper or Post-it Notes.

Invite participants
Connect with the people you want to meet. Prepare a script for your initial conversations that helps them understand the purpose of your research. Don’t be afraid to tap into your personal networks; people are generally happy to share what they know.

Track your recruiting progress
Take notes when you speak with people, so you remember the details of each conversation. Create a checklist that helps everyone on your team keep an overview of the progress and scheduling.

Plan the interaction and logistics
Think about what exactly you want to do with each participant. Where do you want to meet them? How much time will you spend with them? Is there an activity you can do together to enrich the conversation? What will you ask them to show you? Write down your plans for all research activities.

THIS GETS YOU
Appointments to meet and learn from interesting people.

KEEP IN MIND
When planning your interviews, consider the number of people that will be appropriate to attend. Too many interviewers can make people feel uneasy, particularly when adults speak with kids.
Build a Question Guide

Having a good conversation with a stranger is not always easy. When speaking with research participants, you have to both build trust and help them feel comfortable while collecting relevant information. Carefully prepare for your conversations in order to manage this delicate balance.

Identify topics
As a team, brainstorm themes you want to learn about in your conversations with research participants. What do you need to learn about your challenge? What are you hoping to understand about people’s motivations and frustrations? What do you want to learn about their activities? Is the role they play in their network of importance?

Develop questions
Formulate questions that explore these topics. Frame them as open-ended questions, such as:

» “Tell me about an experience...”
» “What are the best/worst parts about...?”
» “Can you help me understand more about...?”

Encourage people to tell you their whole story and avoid yes/no questions.

Organize your questions
Organize your questions using the following structure:

» Start specific: begin with questions your participants are comfortable answering
» Go broad: ask more profound questions about hopes, fears and ambitions.
» Probe deep: explore your challenge or any interesting theme you picked up on during the conversation in more depth. Consider prompting thoughts with “what if” scenarios.

Then create a question guide that is very readable, so you can glance at it quickly during your conversation.

Build tangible conversation starters It can be helpful to share early ideas or concepts in your conversation, particularly when you are working on an abstract challenge. You can create a sketch, build a simple cardboard representation or describe a scenario that your participants can respond to. Your idea does not have to be realistic—it only serves the purpose of gaining a better understanding of your topic.

Confirm your plans
Confirm date, time and location for your research activities. Agree on logistics, including transport, with your team.

Assign roles
Designate one person to lead the conversation. Select a second person who will focus on watching participants’ body language and facial expressions. Decide which team member will take notes, and choose a photographer. Remember to ask permission before taking any photos.

Prepare your equipment
Make sure to gather materials for your fieldwork ahead of time:

» Question guide
» Participants’ contact details
» Team members’ contact details
» Directions to location
» Notepads and pens
» Camera (load batteries!)
» Mobile phones
» Thank you gifts for participants (if applicable)
» Post-it Notes, Sharpie markers

Preparing a list of questions will help you guide the direction of an interview.
Prepare For Fieldwork

Whether you are meeting a group of students in the cafeteria or traveling across town to visit a company, fieldwork activities run smoother with thoughtful preparation. Assign responsibilities to team members ahead of time so everyone knows what to focus on.

**Confirm your plans**
Confirm date, time and location for your research activities. Agree on logistics, including transportation, with your team.

**Assign roles**
Designate one person to lead the conversation. Select a second person who will focus on watching participants’ body language and facial expressions. Decide which team member will take notes, and choose a photographer. Remember to ask permission before taking any photos.

**Prepare your equipment**
Make sure to gather materials for your fieldwork ahead of time:
- Question guide
- Participants’ contact details
- Team members’ contact details
- Directions to location
- Notepads and pens
- Camera (load batteries!)
- Mobile phones
- Thank you gifts for participants (if applicable)
- Post-it Notes, Sharpie markers

---

**Establish trust with participants**
Practice creating an atmosphere in which people feel comfortable enough to open up. Build on the skills you have developed in the school context.
- Listen patiently. Do not interrupt, and allow for pauses to give participants time to think.
- Use non-verbal gestures, such as eye contact, nodding, and smiling, to reassure participants you are engaged and interested in what they are saying.

**Know what to look for**
Look for indications that reveal what people care about—and keep in mind, that they may contradict themselves.
- Look for cues in the things that people surround themselves with or the way they carry themselves.
- Notice workarounds and adaptations people have made to make a system or tool serve their needs better, for example: lowering the height of bulletin boards to make it easier for children to read them.
- Explore things that prompt certain behaviors, for example: a line printed around a track field that causes people to run within a certain area.

**Get the most out of your interactions**
Encourage people to reveal what really matters to them.
- Ask participants to show you the object or space they are talking about,
- Have participants draw what they are talking about,
- Keep asking “why?” in response to consecutive answers.

**Capture what you see**
Take lots of notes and photos of what you see, hear, feel, smell and taste during a field visit. Capture direct quotes. Write down your immediate thoughts without worrying about an interpretation.
**Phase-Step**

1–3

**Gather Inspiration**

Immerse Yourself In Context  
Seek Inspiration In Analogous Settings  
Learn From Experts  
Learn From Users

**WORKSHEET**

Worksheets for this step are available on pages 30-33 of the Designer’s Workbook to help you gather inspiration with your team.

---

**Immerse Yourself In Context**

With a curious mindset, inspiration and new perspectives can be found in many places and without much preparation. Sharpen your skills in observing the world around you.

**Plan your observations**

Choose a place where you can have an experience that is relevant to your challenge. For example, if you are looking for new ideas on arrival and departure procedures at your school, drive up to the drop off area, just as parents do, and try to stop, wait and go.

Think of certain aspects of your experience you want to capture, such as:

- What emotions do you experience (surprises, frustrations, motivations, decision making factors), and why?

- What emotions do you experience (surprises, frustrations, motivations, decision making factors), and why?

- What are peoples’ moving patterns in space?

**Explore and take notes**

Try to blend in with everyone else during your observation. Find a spot that’s out of the way. Take notes and photos. Capture interesting quotes. Draw sketches, plans and layouts.

**Capture what you have seen**

Immediately after your observation, take some time to capture the things you found most interesting, and write them on Post-it Notes so you will be able to reorganize them later.
Seek Inspiration In Analogous Settings

Looking for inspiration in a different context outside of the education world opens the mind and can help you find a fresh perspective. Dare to go out of your comfort zone and explore.

Think of analogies that connect with your challenge
With your team, list all the activities, emotions, and behaviors that make up the experience of your challenge. Next to each of these areas, write down other situations where similar experiences occur. As a team, select the scenarios that you would like to observe. For example, if you are looking to re-envision arrival and departure procedures at your school, consider observing the lobby of a busy yet elegant hotel.

Make arrangements for your activities
Plan the logistics of your activities. Connect with the people you want to visit and explain the purpose of your search for inspiration.

Absorb the experience
During your visit, first observe peoples’ activities and their environments. Then, when appropriate, ask questions about what you have noticed.

EXAMPLE
A team, trying to redesign the library, went to the Apple store to gather inspiration. They observed the ways in which the in-store experience introduces customers to new products as well as how the set-up enabled people to navigate the space and easily find what they were looking for. The team was very inspired by the visit and brought the in-store concierge experience into their final design solution.

Learn From Experts

Experts can provide in-depth information about a topic and can be especially helpful when you need to learn a large amount of information in a short amount of time.

Choose the participants
Choose experts based on your objective: are you looking to learn about their field of study? Would you like someone’s opinion on your topic who has rich knowledge of its context?

Set up for a productive conversation
Carefully plan how you want the conversation to flow. Consider asking the expert to actively help you work on an early concept.
Learn From Users

There are many different ways to learn from users, including individual interviews, learning from people’s self-documentation, group interviews, and learning from peers observing peers. Each type of user research requires a different set-up to ensure the best discovery session and users’ comfort and willingness to share. Choose from the following set of categories and guidelines to support your research.

Learn From Individuals

Spending time with people on their own allows you to deeply engage with and learn from them. Guide the conversation to gain a rich understanding of their thoughts and behaviors.

Create a trusted atmosphere
Start the conversation on a casual note. Talk about a subject that is unrelated to your research first to make the participant feel comfortable. Be considerate of the space you are in and make sure you have the appropriate level of privacy.

Pay attention to the environment
Try to meet in the participant’s context—in their classroom, home, office or workplace. During the conversation, keep your eyes open for what’s around. Ask about objects or spaces you find interesting, and try to get a tour of the environment.

Capture your immediate observations
Take a lot of quick notes in the voice of the participants. Write down interesting quotes. Do not worry about interpreting them yet. Try to capture your observations in the moment.

Get continuous feedback
Consider making one or some of your research participants members of your team to continuously get their feedback and ideas.

Making the user feel comfortable is crucial to the success of an interview. With kids, it’s especially helpful to meet them at eye-level.
**Learn From Peoples’ Self-Documentation**

Asking participants to record their own experiences allows you to learn about them over an extended period of time. Guide participants to capture and share their thoughts, decisions and emotions.

**Plan the documentation activities**

Decide what you would like people to document: feelings, activities, behaviors? Choose the best mode for collecting that information: photographs, diaries, voice recordings, videos?

**Invite and instruct participants**

Give participants tools and instructions to document themselves for several days or weeks. Explicitly explain why and how to record their activities.

**Review with participants**

Look at the materials together with participants after their documentation phase. Ask them not just what the things are that they documented, but also why they chose these details and how they felt about them.

---

**Learn From Groups**

Bringing together groups of people allows you to observe the interactions between them, to recognize community dynamics and issues, and to understand their different opinions.

**Choose the participants**

Consider what you are looking for: to make participants comfortable enough to share details about their passions, bring together groups of like-minded individuals. To find out about individuals’ opinions, invite people with contradicting opinions.

**Listen to the group’s conversations**

Encourage conversations between participants and consider dividing people into smaller groups to better facilitate these discussions.

**Capture your immediate observations**

Take a lot of quick notes in the participants’ voices. Write down interesting quotes. Do not worry about interpreting them yet. Try to capture your observations in the moment.

**Get continuous feedback**

Consider setting up a panel of participants that you engage with throughout your project to continuously receive feedback on your ideas.

---

**KEEP IN MIND**

Often teenagers and young people find self-documentary exercises less intimidating than adults and enjoy expressing themselves in new ways.
**Learn From Peers Observing Peers**

There is a level of understanding between peers that you can’t immediately get as an outside observer. Make select participants part of your research team. Ask them to speak with and observe their peers.

**Select your research partners**
Choose people that are trusted and respected amongst their peers as well as articulate and excited to participate. Invite them to become part of your research team.

**Decide on compensation**
Decide how you will thank your research partners, and prepare accordingly.

**Guide their research**
Together with your new team members, define what you are trying to learn about, and think of activities to source and record this information.

**Meet frequently**
Create regular interactions with your research team and integrate them in a structured way.
Phase 2

Interpretation

WHERE YOU ARE IN THE PROCESS

WHAT'S IN THIS PHASE

2.1 Tell Stories 41
2.2 Search for Meaning 43
2.3 Frame Opportunities 46
Interpretation transforms your stories into meaningful insights. Observations, field visits, or just a simple conversation can be great inspiration—but finding meaning in that and turning it into actionable opportunities for design is not an easy task. It involves storytelling, as well as sorting and condensing thoughts until you’ve found a compelling point of view and clear direction for ideation.
The Evolution of Your Notes

Throughout the Interpretation phase, your perspective will evolve and change. As you gain a clearer understanding of what your observations mean, you can relate them to your challenge and use them as inspiration. This part of the process can be confusing. Use the examples below to navigate the development of your notes from early thoughts to ideas.

**LEARNINGS**
Learnings are the recollections of what stood out during a conversation or observation: direct quotes, anecdotes, notes on sounds, smells, textures, colors, etc. They are communicated in full sentences to capture the story.

**THEMES**
Themes are created after you have organized your stories from field research into categories. They are the headlines for clusters of similar learnings.

**INSIGHTS**
Insights are a succinct expression of what you have learned from your field research activities. They always offer a new perspective, even if they are not new discoveries. They are inspiring and relevant to your challenge.

**HOW MIGHT WE’S**
“How might we” questions are the starting point for a brainstorm session. They are written in direct response to an insight. These questions feel optimistic and exciting and help you think of ideas right away.

**IDEAS**
Ideas are generated during a brainstorm session. They can be very practical and simple or wild and crazy—judgment is deferred, as the goal is to come up with as many ideas as possible. Ideas are best communicated with quick sketches.
**Tell Stories**

Capture Your Learnings
Share Inspiring Stories

**WORKSHEET**

Worksheets for this step are available on pages 36-39 of the Designer’s Workbook to help you tell stories with your team.

**Capture Your Learnings**

When you step out of an observation, it’s easy to feel overwhelmed by the amount of information you have taken in. Use the half hour immediately after the session to start capturing what you have learned.

**Find a space and time**

Plan extra time so that you can share your thoughts and impressions right after your observation. This may often happen in a coffee shop or while in transit.

**Share your impressions**

With your team, share the things you found most interesting. Do not worry about interpreting these stories yet. Listen to each others’ recollections of the observation. Compare experiences and impressions.

To cover the most important topics, consider using these prompts:

- Personal details: who did you meet (profession, age, location, etc)?
- Interesting stories: what was the most memorable and surprising story?
- Motivations: what did this participant care about the most? What motivates him/her?
- Frustrations: what frustrated him/her?
- Interactions: what was interesting about the way he/she interacted with his/her environment?
- Remaining Questions: what questions would you like to explore in your next conversation?

**Document your thoughts**

Capture your observations in a notebook or on Post-it Notes. Writing them on Post-it Notes will make them easier to reorganize them later. Illustrate your thoughts with drawings.
**Share Inspiring Stories**

Share what you learned from your research as stories, not just general statements. This will create common knowledge that your team can use to imagine opportunities and ideas.

**Set up a space**
Plan your storytelling session in a room with plenty of wall space. Distribute Post-it Notes and markers. Have a flip chart pad or large sheets of paper nearby, as well as tape to attach these sheets to the wall.

**Take turns**
Describe the individuals you met and the places you visited. Be specific and talk about what actually happened. Revisit the notes you took right after your observation. Print out your photos and use them to illustrate your stories.

**Tell the story of each person following these prompts (you may have already used them when capturing your first impressions):**

- Personal details: who did you meet? (profession, age, location etc)
- Interesting stories: what was the most memorable and surprising story?
- Motivations: what did this participant care about the most? What motivates him/her?
- Barriers: what frustrated him/her?
- Interactions: what was interesting about the way he/she interacted with his/her environment?
- Remaining Questions: what questions would you like to explore in your next conversation?

**Actively listen**
While you are listening to each other, compare and contrast the things you have learned. Explore areas where you find different opinions and contradictions. Begin to look for recurring themes.

**Capture the information in small pieces**
Write down notes and observations on Post-it Notes while listening to a story. Use concise and complete sentences that everyone on your team can easily understand. Capture quotes—they are a powerful way of representing the voice of a participant.

**Surround yourself with stories**
Write large enough so that everyone can read your notes. Put all Post-its up on the wall on large sheets of paper. Use one sheet per story, so you have an overview of all your experiences and the people you have met.
Find Themes
Make Sense of Findings
Define Insights

WORKSHEET

Worksheets for this step are available on pages 40-42 of the Designer’s Workbook to help you search for meaning with your team.

Search for meaning

Find Themes

After having collected and shared stories from your fieldwork, begin to make sense of all that information and inspiration. This part of the process can take some time. A good first step is to identify themes.

Cluster related information
Group findings from your field research into categories or buckets. You can start by having every team member choose three Post-its they find most interesting. Place each of them on a large sheet of paper and begin to look for more evidence of the same theme. What did many people mention? Did someone else say the opposite? Are there behaviors you saw repeatedly? Which issues were obvious? Rearrange the Post-its into these new buckets.

Find headlines
Name the clusters you have defined, e.g., “lack of space.” Continue to sort and rearrange the information until you feel you have picked the interesting bits out.

Turn headlines into statements
Have a closer look at your themes and the stories that support them, and express them in a meaningful way, e.g., “There is a lack of space for teachers to do their work.” Write a full sentence. Use a new Post-it and label your cluster with that statement.
Make Sense of Findings

Once you have created themes as an overview of your research findings, begin to take a closer look at what they mean. Sort and analyze them until they help you build a clear point of view.

Look for links between themes
Take a closer look at your themes and find overlaps, patterns and tensions as they relate to each other. Can you group several related themes in larger categories? What contradictions do you find? What feels surprising and why?

Continue to move around your Post-it Notes and sheets. Make sure to group supporting stories with more abstract themes.

Dig deeper
With your team, take a step back and discuss what you have discovered. Are there themes that you have different opinions about? What are you most excited about? Can you begin to see the relevance of your challenge?

Regroup the information and add new versions of your headlines until they feel strong. For example, you might group the themes “there is a lack of space for teachers to do their work” and “the faculty room does not encourage collaboration” together as “teachers need flexible space to collaborate.”

Get input from the outside
Explain the themes to someone who is not part of your team. Learn from their feedback and try alternative ways of organizing the information.

Be prepared to let go
Leave behind stories that don’t seem important. Clean up your space and only keep the information you are still using.
INSPECTION

Define Insights

Insights are a concise expression of what you have learned from your research and inspiration activities. They are the unexpected information that makes you sit up and pay attention. Insights allow you to see the world in a new way and are a catalyst for new ideas.

Select what surprised you

Look across your buckets and themes and choose the information that you find most surprising, interesting, or worth pursuing. What have you learned that had not occurred to you before? What did you find most inspiring? What sparked the most ideas?

Reconnect the learnings to your challenge

Revisit the questions that you started out with: how do your findings relate to your challenge? Narrow down the information to those insights that are relevant and find new clusters. Be prepared to let go of details that are less important. Try to limit your insights to the three to five most important.

Craft your insights

Experiment with the wording and structure to best communicate your insights. Create short and memorable sentences that get to the point. Make sure your insights convey the sense of a new perspective or possibility.

Get an outside perspective

Invite someone who is not part of your team to read your insights and check whether they resonate with an outside audience.

EXAMPLE

A team of educators from the Blue Valley Center for Advanced Professional Studies (CAPS), Overland Park, KS, was challenged with publicizing the programs they offer at the newly-built building. The team went out to connect with people in local schools, universities and businesses. In the process, they uncovered the insight that parents are the gatekeepers of student time. While not entirely new knowledge, it helped the team realize that this significantly affected the way they should think about promoting their programs. As a result, they re-framed the marketing to focus on the parent. The core need, they had learned, of parents was to feel that they could trust the experience.

“We discovered that seeing is indeed believing when it came to communicating with parents. Monthly tours and open houses were scheduled to allow parents to discover what the CAPS experience was about on their own. The re-frame of our marketing caused enrollment to skyrocket 42% and filled the building with over 1,000 student participants,” said Scott Kreshel, CAPS team lead.
Frame Opportunities

Create a Visual Reminder
Make Insights Actionable

WORKSHEET

Worksheets for this step are available on pages 43-45 of the Designer's Workbook to help you frame opportunities with your team.

Create a Visual Reminder

Just as you use visuals in the classroom to make complex information more accessible, illustrations, diagrams and frameworks are great tools to communicate your insights.

Experiment with various visualizations
Try to express your learnings through different frameworks. Here are a few examples:

- Journeys are great for looking at an experience over time. You can map peoples' moods, experiences or needs.

- Venn diagrams help you express a few important themes and the relationships between them.

- Two-by-twos help emphasize tensions and create different categories.

- Maps help visually explain relationships.

Test your framework
Share your visualizations with someone who is not part of your team and get an outsider's point of view as to whether they make sense.
**Make Insights Actionable**

Insights only become valuable when you can act on them as inspiring opportunities. Turn them into brainstorm questions, the springboard for your ideas.

For example:

“How might we create a teachers’ lounge with large couches?” implies the solution is a room with large couches.

“Why do we want to do that?” surfaces the actual need of a space for teachers to be able to wind down in between classes. The brainstorm question would then be:

“How might we create a space for teachers to unwind between classes?”

This expands possible solutions beyond the idea of a room with couches.

Develop “how might we” questions

Create generative questions around your insights. Start each statement with “How might we...?” or “What if...?” as an invitation for input, suggestions and exploration. Generate multiple questions for every insight. Write them in plain language, simple and concise.

Choose brainstorm questions

Select three to five of these questions for your brainstorm session. Trust your gut feeling: choose those questions that feel exciting and help you think of ideas right away. Also, select the questions that are most important to address, even if they feel difficult to solve for.

Working together in a workshop, a group of teachers created multiple questions in order to feed rich brainstorming.
Phase 3

Ideation

WHERE YOU ARE IN THE PROCESS

3.1 Generate Ideas
3.2 Refine Ideas

WHAT'S IN THIS PHASE

50
54
Ideation means generating lots of ideas. Brainstorming encourages you to think expansively and without constraints. It’s often the wild ideas that spark visionary thoughts. With careful preparation and a clear set of rules, a brainstorm session can yield hundreds of fresh ideas.
Phase-Step

3-1

Generate Ideas

Prepare for Brainstorming
Facilitate Brainstorming
Select Promising Ideas
Sketch to Think

WORKSHEET

Worksheet 3-1 is available on pages 48-55 of the Designer’s Workbook to help you generate and document ideas with your team.

Prepare for Brainstorming

Brainstorming may often be thought of as wild and unstructured, but it in fact is a focused activity that involves a lot of discipline. Take the time to set up appropriately in order to get the most out of your session.

Start with a well-defined topic
Think about what you want to get out of the session. Select several focused brainstorm questions.

Choose an appropriate space
Reserve a room with sufficient wall space, where participants can comfortably get up from their chairs and move around.

Provide tools to capture ideas
Gather materials like Post-it Notes, markers, paper and snacks. Don’t underestimate the power of sugar in a brainstorming session.

Invite a diverse group of people
Consider involving people who are not part of your team, as they’ll have a fresh perspective. Include six to eight people.

Plan for 45–60 minutes
Keep brainstorming sessions to an hour at most, to maintain focus and energy.

THIS GETS YOU
The setup for a dynamic brainstorming session.

KEEP IN MIND
When you make brainstorming part of another activity, lesson or meeting, remember that generating ideas is a mode that participants need a little time to get into. Create the time and space for a transition into that mindset.
Brainstorming Rules

These seven rules will make your brainstorming session focused, effective and fun. Introduce them at the start of every brainstorm, even if they merely serve as a reminder for experience participants.

Defer judgement. There are no bad ideas at this point. There will be plenty of time to narrow them down later.

Encourage wild ideas. Even if an idea doesn’t seem realistic, it may spark a great idea for someone else.

Build on the ideas of others. Think “and” rather than “but.”

Stay focused on topic. To get more out of your session, keep your brainstorm question in sight.

One conversation at a time. All ideas need to be heard, so that they may be built upon.

Be visual. Draw your ideas, as opposed to just writing them down. Stick figures and simple sketches can say more than many words.

Go for quantity. Set an outrageous goal—then surpass it. The best way to find one good idea is to come up with lots of ideas.
Facilitate Brainstorming

Brainstorming is a great activity to generate fresh thoughts and new energy. Create a safe and positive atmosphere for your brainstorm so the team can come up with all kinds of wild ideas.

**Select a facilitator**
Decide on a person to lead the group through the activity. Familiarize yourself with brainstorming protocol.

**Present your topic**
Briefly introduce the challenge you are working on. Share some of the exciting stories from your Discovery phase.

**Introduce the rules of brainstorming**
Explain each rule and its purpose to set the right tone for the activity. You can find an overview of brainstorming rules in the beginning of this section.

**Equip everyone for participation**
Gather your team near a wall or flipchart. Give everyone a Post-it Pad and a marker. Encourage people to draw and be visual. Remind them to write in large letters and to note only one idea per Post-it.

**Start with a warm-up**
Choose a fun, easy or even unrelated activity to get people in the right mood:
- Warm-up brainstorm: how might we find a needle in a haystack?
- Never could we ever: brainstorm things you could never do at your school.
- Get visual: ask everyone to draw his or her neighbor in a minute. Share.

**Move one by one**
Post the question you are brainstorming about on the wall so everyone can see it. Ask participants to take a few minutes and write down their first ideas before starting as a group. Then facilitate the brainstorm and capture each individual idea.

**Keep the energy high**
Provide encouragement or alternative topics if the flow of ideas slows down. Switch to a new brainstorm question every fifteen to twenty minutes. Throw out some wild ideas yourself. Remind your team of the rules if needed. Set a goal for how many ideas you want to generate in total.

This team invited people outside the project to help them get unstuck and expand their design possibilities.
Select Promising Ideas

It is the passion and energy of a team that makes the development of an idea successful. To get a sense of which brainstorming ideas generate excitement, let everyone on the team vote on their favorites while they are still fresh in their minds.

Cluster the ideas
Spend a few minutes immediately after a brainstorming session grouping together similar ideas.

Vote for favorite ideas
Ask the brainstorm participants to each select an idea that is their personal favorite, the one they want to work on, or the one they believe is most promising. Give everyone a limited number of choices. Let people decide in silence first, so that they are not swayed by others’ opinions. Vote directly on the brainstorm Post-its, either using sticky dots or simply drawing a dot.

Discuss the results
Count the votes and determine the most popular ideas. As a team, take the most promising ideas and decide which ones to develop further. Be realistic about the number you can pursue—aim for three ideas to start with.

Sketch to Think

Sketching even a simple representation of an idea makes you think through a lot of details. Brainstorm ways to bring your concept to life early to figure out how you might take an idea further.

Pick an idea
Right after your brainstorming session, form several groups of two to four people and pick ideas to sketch in more detail.

Expand the idea
Now that you have chosen an idea to sketch in more detail, spend a few minutes brainstorming simple ways to bring the concept to life. Create a simple expression of your idea. Keep it simple and only focus on the most important aspects of your idea. Make sure you’re still brainstorming and expanding on the idea, rather than being critical and limiting your possibilities.

Share back
Present your ideas to each other. Ask the other group members for feedback about their favorite parts of your sketch as well as aspects where they see room for improvement.
Refine Ideas

Do a Reality Check
Describe Your Idea

WORKSHEET
Worksheet 3–2 is available on pages 56-59 of the Designer’s Workbook to help you refine ideas with your team.

Do a Reality Check

So far, you have (hopefully) been developing your idea without giving much thought to the constraints you may face while attempting to realize it. It makes sense to now do a reality check: look at what’s most important about your idea and find ways to evolve and develop it further.

Find out what your idea really is about
As a team, examine what’s at the core of your idea: what gets you excited about it? What is the most important value for your audience? What is the real need that this is addressing? For example, if your idea is creating a teachers’ lounge with large couches, the real value is in allowing teachers to unwind.

List constraints
Make a list of all the challenges and barriers you are facing with your idea. What are you missing? Who would oppose the idea? What will be most difficult to overcome? Put the list up on the wall so it is visible to the team. Remember, constraints are helpful for design... don’t feel too daunted by this list!

Brainstorm new solutions
First, start from the list you created in step one of this method, describing the core values of your idea. Think up additional possibilities that might satisfy the needs your idea responds to. Consider facilitating a quick brainstorm to come up with more ideas. For example: how might we create spaces for teachers to unwind between classes?

Then revisit your list of constraints. Brainstorm how you might address some of these challenges. For example: how might we raise money to acquire furniture for our common space?

Evolve your idea
Discuss how you can change your concept based on your new ideas. How can you address the need differently? How can you work around the constraints you are facing?

Archive ideas
Let go of ideas that feel too difficult to create, or that you are not excited about. Keep your Post-its and notes so you can revisit them later.
Describe Your Idea

Once an idea has started to evolve, you may find it helpful to capture your thoughts in a more structured format. Create a concept description. Consider it a repository for thoughts and questions rather than a finished piece.

Capture your thoughts

With your team, use a large sheet of paper to summarize your idea. Use the following structure to describe its most important aspects:

- Choose a title for your idea
- Summarize your idea in a single sentence
- Describe how your idea would work
- Name the people it involves, both to build as well as to use it
- Explain the needs and opportunities identified through field research
- Illustrate the value and benefit for each person involved
- List questions and challenges

Evolve your summary

Change and adjust your concept description continuously as you prototype and iterate your idea. Keep it in a place that is visible to all team members.

Before building their prototype, the team took some time to think through a few details around their concept. Having written out the specific items necessary to build out experience of the concept, the team was able to divide and conquer while prototyping.
Phase 4

Experimentation

WHERE YOU ARE IN THE PROCESS

WHAT’S IN THIS PHASE

4-1 Make Prototypes
4-2 Get Feedback
Experimentation brings your ideas to life. Building prototypes means making ideas tangible, learning while building them and sharing them with other people. Even with early and rough prototypes, you can receive a direct response and learn how to further improve and refine an idea.
**Phase-Step 4-1**

**Make Prototypes**

Create a Prototype

**WORKSHEET**

Worksheet 4-1 is available on pages 62-63 of the Designer's Workbook to help you document your prototypes.

**THIS GETS YOU**

A tangible representation of your idea that you can share and learn from.

**KEEP IN MIND**

- Keep a “parking lot” for questions that come up while you build prototypes. Revisit and answer them as you develop your idea further.
- Capture the evolution of your prototype over time as you make changes and increase its resolution.

**DIFFICULTY**

- 45–90 min
- Hands-On
- 2–4 People

Prototypes enable you to share your idea with other people and discuss how to further refine it. You can prototype just about anything. Choose the form that suits your idea best from the list below.

**Create a storyboard**

Visualize the complete experience of your idea over time through a series of images, sketches, cartoons or even just text blocks. Stick figures are great—you don’t need to be an artist. Use Post-it Notes or individual sheets of paper to create the storyboard so you can rearrange their order.

**Create a diagram**

Map out the structure, network, journey or process of your idea. Try different versions.

**Create a story**

Tell the story of your idea from the future. Describe what the experience would be like. Write a newspaper article reporting about your idea. Write a job description. Create a letter to be sent to parents. Describe your idea as if it were published on the school website.

**Create an ad**

Create a fake advertisement that promotes the best parts of your idea. Have fun with it, and feel free to exaggerate shamelessly.

**Create a mock-up**

Build mock-ups of digital tools and websites with simple sketches of screens on paper. Paste the paper mock-up to an actual computer screen or mobile phone when demonstrating it.

**Create a model**

Put together simple three-dimensional representations of your idea. Use paper, cardboard, pipe cleaners, fabric and whatever else you can find. Keep it rough and at a low fidelity to start, and evolve the resolution over time.

**Create a role-play**

Act out the experience of your idea. Try on the roles of the people that are part of the situation and uncover questions they might ask.
Ways to Prototype

Prototyping is not about getting it right the first time: the best prototypes change significantly over time.

Challenge yourself to come up with at least three different versions of your idea to test multiple aspects of the possible solutions your team has come up with.
Get Feedback

Identify Sources for Feedback
Select Feedback Participants
Build a Question Guide
Facilitate Feedback Conversations
Capture Feedback Learnings
Integrate Feedback
Identify What’s Needed

WORKSHEET

Worksheet 4–2 is available on pages 64-73 of the Designer’s Workbook to help you get feedback with your team.

Identify Sources for Feedback

Feedback is one of the most valuable tools in developing an idea. Sharing prototypes helps you see what really matters to people and which aspects need improvement.

Consider the setting
Decide what context you want to share your idea in. Is it helpful to first show a rough idea in an informal setting you are familiar with? Will you learn the most from seeing your prototype in the context it will be used in?

Define what to test
With your team, determine what kind of feedback you are looking for: Do you want to get feedback on the first impression of your idea? Are you trying to learn whether people would participate in a new activity you designed? Are you wondering whether people will change behaviors over time because of your concept? Capture your thoughts and create a list that will remind you of the goals of your research.

Define feedback activities
Based on what you are trying to learn, carefully plan your feedback activities. Arrange for a conversation if you are interested in a first impression. Set up an activity or service as if it were real if you want to observe peoples’ actual behaviors. Consider letting people use a prototype over a period of time if you are interested in its longer-term impact.
Select Feedback Participants

People who have continuously seen the development of your idea can provide detailed feedback, while those new to the concept can help you understand which aspects are most appealing and/or difficult. Consider which perspectives are most important.

Decide on who to involve
Create a list of people you want to engage in the feedback process. Revisit the overview of your audience. Discuss whom you will learn the most from. Include people you have met during your field research as well as new participants.

Plan the interaction and logistics
Determine a meeting place and timeframe for your feedback sessions. Consider asking participants to use your prototype ahead of meeting you.

Invite participants
Reconnect with participants you met earlier in the process. They are generally excited to see the progress of your idea development. Identify new participants within and outside of your network.

Build a Question Guide

A good feedback conversation is a mix of spontaneous reactions to your prototype as well as structured questions designed to compare various peoples’ opinions about the same topic. Prepare a question guide that helps you navigate both sides.

Choose open questions
Revisit questions that came up during the development of your idea. Pick those that you want to include in feedback sessions. With your team, discuss other areas to explore.

Frame questions to encourage build
Formulate your questions so that they lead to constructive feedback and encourage participants to build on your idea, such as:

- “Can you describe what excites you the most about this idea, and why?”
- “If you could change one thing about this prototype, what would it be?”
- “What would you like to improve about this idea?”

Arrange your question guide
Organize your questions according to the following structure:

- Start with general impressions. Let the participants share their initial thoughts about your concept.
- Ask for specific feedback about your concept.
- Open up the discussion and encourage a broader conversation.

Create a readable format of the question guide, so you can glance at it quickly during your conversation. Be mindful of the timing of your conversation.
Facilitate Feedback Conversations

The most important ingredient in a feedback conversation is honesty: people may feel shy about telling you what they really think of your idea if they know that you are very invested in it. Create a setting that encourages an open conversation.

**Invite honesty and openness**
Introduce your prototype as a sketch that you are working on. Make it clear that the development of your idea is still in progress, and that you have not spent much time on building the prototype or refining the details.

**Provide multiple prototypes**
Prepare various versions of your prototype to encourage people to compare and contrast.

**Stay neutral**
Present all concepts with a neutral tone. Don’t be defensive—listen to all the feedback and take notes both on the positive and negative comments.

**Adapt on the fly**
Encourage participants to build on the idea, and change your prototype right away. Be ready to eliminate or change parts of the idea.

The feedback helped teachers understand what felt engaging to the students, so that they could continue to refine the ideas. They didn’t ask the students for approval or disapproval.
Capture Feedback Learnings

Feedback conversations are rich in information, and the subtle impressions of a participant’s reactions are often most important to remember. Take some time right after your session to capture what you have observed.

**Find a space and time**
Plan for some extra time after a feedback session, so you can share your impressions right after your conversation when they are still fresh in your mind.

**Capture your ideas and design iterations**
Discuss how to improve your prototype and capture ideas for a next iteration immediately.

**Share your impressions**
Discuss the conversation with your team. Compare each other’s learnings. Take notes on your conversation. Consider using the following prompts:
- What did participants value the most?
- What got them excited?
- What would convince them about the idea?
- Which parts would participants like to improve?
- What did not work?
- What needs further investigation?

Immediately after sharing their prototype with a user, this team met to review feedback while it was still fresh in their mind and quickly iterate the prototype for their next feedback session.
**Integrate Feedback**

Feedback is invaluable to developing an idea, but can also be quite confusing. It may be contradictory, or may not align with your goals. Sort through the responses you receive and decide on what to integrate in your next iteration.

**Cluster the feedback**
As a team, discuss the reactions you received to your prototypes. Start by sharing the impressions you captured right after your feedback conversations. Take notes on Post-its. Sort and cluster the feedback: what was positively received? What concerns came up? What suggestions and builds did you find?

**Evaluate the relevance**
Take a moment to revisit where you started. Look at your earlier learnings and ideas. What was your original intent? Does it still hold true, based on the feedback you have received?

Prioritize the feedback: what is most important to making it a success? Sort your notes and create an overview of which feedback you want to respond to.

**Iterate your prototype**
Incorporate valuable feedback into your concept. Make changes where people saw barriers. Emphasize what was well received. Then, create a new prototype that you can share. Go through feedback cycles repeatedly and continue to improve your concept.

**EXAMPLE**
A diverse team in Albemarle County Public Schools in Charlottesville, Virginia got together to rethink their library spaces. They wondered if a repository of knowledge was the most pressing need for today’s student, and considered: How might we create spaces where kids can search, connect, communicate and make?

Through the Interpretation phase, the team identified insights around access, flexibility, and collaboration that design solutions needed to deliver on to be successful. They built rapid, low-cost prototypes... converting libraries to try out new solutions without major investment. They set up learning plans to ensure they were capturing feedback from the students and other stakeholders in the schools.

Superintendent Pam Moran celebrates experimentation and prototyping, holding the idea that no design is static. They collected feedback from students and from staff, and iterated on the design based on that feedback aiming to ensure that the designs are great for the students, and respond to the school’s unique identity. Pam knows the danger of one-size-fits-all solutions across a district. Solutions range from IdeaPaint walls to toolcrib technology to media labs where kids can create diverse projects – from rap music to documentary films. By designing for the needs of today’s students, Albemarle is evolving the shared spaces in their schools to allow for a mix of quiet contemplation and maker enthusiasm.
Identify What’s Needed

Most concepts cannot be fully realized with just one prototype. Continuous iteration on your concept, requires various resources and capabilities, namely, money, time and people. Specify what exactly it will take to make your idea come to life.

Specify materials
Make a list of all the materials you will need to build your concept. Are these supplies available at your school? Will you need to purchase any new assets?

Calculate funds
Money will always be a scarce resource in an educational context. Don’t let this discourage you. Think about creative ways to hold a fundraiser. Look into applying for a grant. Consider opportunities to tap into existing budgets. Don’t forget to explore how to realize your idea with limited funds as a brainstorm challenge.

Estimate timeframes
Specify the amount of time that you’ll need to create your concept. Do you need time for preparation? Does anyone need to be trained? Do you want to use an existing meeting time differently?

Identify people and partners
Create an overview of people who can help realize your idea. What capabilities are you looking for? Who is invested in supporting the concept? Do you need to find someone to champion the idea? Identify which capabilities you have inside your school, and which you’ll have to find externally. Think about leveraging the larger network and including parents, alumni and/or neighbors.

Choose a plan of action
Choose which activities will best help you move your concept forward. Do you need to make a pitch document? Do you need to engage partners? How will you share your story?
Phase 5

Evolution

WHERE YOU ARE IN THE PROCESS

WHAT'S IN THIS PHASE

5.1 Track Learnings 68
5.2 Move Forward 70
Evolution is the development of your concept over time. It involves planning next steps, communicating the idea to people who can help you realize it, and documenting the process. Change often happens over time, and reminders of even subtle signs of progress are important.
Define Success
Document Progress

**Worksheet**

Worksheet 5-1 is available on pages 76-79 of the Designer’s Workbook to help you track learnings with your team.

**Define Success**

As your concept evolves, you can begin to measure its impact. Define a set of criteria for success to help guide and evaluate the development as you scale and build on your idea.

**Consider the people involved**

Revisit your initial overview of the audience. Consider which values your concept has for each of these groups of people: is the prototype being used by the people you intended it for? What do they appreciate about your concept?

**Identify indicators for success**

As a team, discuss what success means for you:

- Are you hoping to count on a large number of colleagues attending an event?
- Which stories would you like to hear parents tell?
- What outcomes would you like to see called out in a school report?
- What would you tell the school’s leadership in order to receive more funding?
- What would you like to hear a student say about your idea?

**Track what happens**

Think about how you want to measure the impact. Will you actively ask people? Can you count numbers? Will you rely on data from others?

Plan how to track these indicators. Observe and take notes on the impact over time, periodically reconsidering these criteria.
Document Progress

Once an idea has been implemented and become a part of everyday life, it is easy to lose sight of its impact. Change often happens slowly, and subtle reminders of success are important.

Track signs of change
Use the research skills you acquired during the Discovery phase to observe indicators of change over time. Have you noticed different behavior? Have the relationships between people changed? Did you notice comments from your students? Ask questions, listen to stories and take notes and photos.

Share stories
Arrange reflection meetings with your team. Tell each other stories of your observations. Write down quotes and observations and identify common themes.

Discuss effects
As a team, reflect on the changes you have noticed. Compare your impressions with initial circumstances. Revisit the learnings from your early discoveries. Consider creating a “before/after” overview.

Celebrate achievements
Build an awareness of the changes that have come from your concept. Even if incremental, celebrate with your colleagues and encourage their continued involvement.

THIS GETS YOU
Evidence of the impact your concept is creating over time.

KEEP IN MIND
Make sure to keep your eyes open for both positive as well as unintended signs of impact. It’s often the workarounds and unintentional use of concepts that inform new design challenges.
**Move Forward**

Plan Next Steps
Engage Others
Build a Community

**WORKSHEET**

Worksheet 5–2 is available on pages 80-93 of the Designer’s Workbook to help you move forward with your team.

**Plan Next Steps**

The implementation of an idea requires a different approach from its generation. When your idea has evolved into a solid concept, it’s time to plan the next steps. With your partners and team, create a timeline for bringing the concept to life.

**List tasks**
Create an overview of all the actions that need to be taken to build your concept. Write them down on Post-it Notes. Use different colored Post-its to capture open questions.

**Assign champions**
Appoint a person on your team or a partner to each of the tasks you have identified. Review the questions: Decide who will be responsible for finding an answer. Write the name of the person responsible for a task on that Post-it Note.

**Identify gaps**
Are there activities that you can’t assign to anyone, or open questions you can’t find an answer to? Create a list of tasks that you need to seek help with.

**Create a timeline**
Map all the tasks to a timeline. Form agreements about the timing and commit to certain dates.

**Plan regular check-ins**
Set up a time for a regular, informal team meeting (for example, a weekly breakfast check-in of 30 minutes) to keep the momentum going. Use this time to share thoughts, ideas and concerns.

**Phase-Step 5–2**

**DIFFICULTY**

A calendar outlining team members’ involvement in realizing your concept.

**KEEP IN MIND**

An idea often changes significantly when people start using it and adjust it to their own needs. Consider adaptations as yet another learning opportunity. Build a strong team and let people feel ownership of their contributions.
Engage Others

In order to reach the full potential of new designs, the solutions must be shared with audiences outside your core design team. Depending on the outcomes that you hope to achieve with your solutions, you may need to pitch your concept, engage partners, or share your story. Choose a method for engaging that will support your end goals.

**EXAMPLE**

Though several months of community planning sessions were already completed on the The Castle Complex Redesign Initiative in Kaneohe Hawaii, the team created a series of outward facing mini-design charrettes to gain further input from the larger community. The team wanted to assess community interest, test the resonance of ideas for their trending direction, and engage the larger community in the implementation phase. To reach this larger audience, the team held one of the public outreach session and design charrettes was held at the local Windward Mall. This allowed them to have a dialog with the larger community about the proposed chances at Castle High, and they were able to get more feedback, but also investment from the community.
Pitch Your Concept

A credible and inspiring story will help convince others to support your concept. Build your pitch to motivate others to help bring the idea to life.

Know your audience
Think about who you are trying to get excited about your idea. Put yourself in the shoes of the listener: what will get them interested in your idea? What will they be motivated by?

For example:
- For educators: how is it going to help me do my job? How is it going to help my students succeed?
- For administrators: How does this affect the way our school is viewed?
- For parents: how is this going to help my child succeed in school?
- For students: how is it going to make learning more fun?
- For potential team members: why would I want to be part of this? What’s in it for me?

Highlight the potential
Create a provocative statement for your idea. Get your audience excited about the opportunities you see. Frame it as “What if…?”

Build a narrative
Tell a brief and engaging story, focusing on the most important aspects of your concept. Describe what inspired your idea, and how it responds to the needs you learned about. Describe early feedback you’ve gotten from prototypes you’ve made or pilots you’ve run.

Communicate the value
Explain the value your idea provides for the various people involved. Be explicit and illustrative in your descriptions. Be specific about your needs. Be clear about what you want from your audience. Draw from your list of needs and communicate what support you need.

Encourage contribution
Invite others to join the conversation or help build the concept. Consider engaging your audience in an activity that lets them experience and participate in the design process.

Build Partnerships

Often you do not have all the capabilities or resources available to realize an idea. Look outside and find partners who can help you bring a concept to life.

Specify your needs
Revisit the list of needs you created for your concept. Consider which needs you have the resources for, and which you cannot do yourself.

Identify partners
Create an overview of organizations or individuals that have capabilities you are missing. What is your relationship with them? How can you reach out to them? Make a list of who will contact these potential partners.

Structure the collaboration
Adapt your pitch story to share the excitement about an idea with new partners and clearly communicate your hopes for the collaboration. Write down goals, meeting times and responsibilities to build a common understanding of everyone’s contributions.

Learn from each other
Make your interactions with a partner a true exchange of meaningful ideas. Have an open dialogue about your progress, ask a lot of questions and actively encourage partners to share their thoughts.
**Share Your Story**

Stories are the most powerful way to communicate the experience of the design process. Craft a story that can be shared broadly.

**Collect memories**
With your team, spend time recollecting the experience of this process. Remember favorite moments, surprising encounters and the most challenging days. Take notes on Post-its.

**Build a narrative**
Create a story about your experience. Use the prompts below to structure your thoughts.

- Create an overview:
  - What challenge did you start out with?
  - Who was part of the team?
  - What partners did you integrate?
  - What needs did you find out about?
  - How did you respond to what you learned?
  - What experience did you create?

- Talk about interesting experiences:
  - What was the most surprising thing you learned while looking for inspiration?
  - What was your most absurd brainstorm idea?
  - The most creative prototype?

**Share your impressions:**
- Which moments of the experience were most rewarding?
- Which part of the process was most difficult?

Use photos to illustrate your story.

**Spread your story**
Consider various methods of sharing your story. Create materials that help your team members communicate the story. Craft an email that can be forwarded. Write a short description that can be integrated in a letter to parents or an article for the school’s website.

---

**EXAMPLE**

Albemarle School District brought their design brief to the table when discussing the redesign of their school libraries. Having done their own user research and having gained new empathy for their students’ need, the librarians were able to generate interesting ideas that neither consultant nor division central staff nor architects had considered. The district says that in some ways, this project has turned the tables so that the architects don’t come in as the experts but as the listeners. The librarians and teachers led the architecture design discussions armed with the voice of their users. They were able to help bridge the gap between those who design for them to enable them to understand the unique nature of today’s learner as well as the distinct characteristics of their own schools’ needs. For example, the librarians helped shift the architects’ mindset from a paradigm of building large architecturally important circulation desks anchoring librarians’ to their desks, to understanding the needs of today’s librarian based on flexible circulation and integration of today’s research technology.

---

**EXAMPLE**

Teachers at Ormondale Elementary School created a Guide to Investigative Learning in order to share the method of teaching inspired by their Design Thinking activities with new faculty joining the school.
**Build a Community**

A design network can support the deepening of your practice as a designer. Build a community where you can share experiences and get advice on your own challenges.

**Build a network**

Invite colleagues, experts, and friends to participate in your design community. Participants may be experts or novices in Design Thinking but should include people you feel comfortable sharing new ideas and frustrations with.

**Plan check-ins**

With your network, agree upon frequency, location, and timing of your visits. Checking-in can be virtual or in-person but must be scheduled. Use the meeting dates to help create your own deadlines.

**Learn over time**

By now you’ve probably completed at least one design challenge. A deeper understanding of Design Thinking can only come from repeated use of the process. Define a new design challenge and leverage this design community to enable you to make greater impact with your solutions.

**EXAMPLE**

Eager to invigorate his work, David Rothauser at New Design High School in NYC saw an opportunity to draw on the collective expertise of the diverse faculty he worked with. He formed the Beehive Group, in order to have a professional development team which could contribute thinking to each other’s classroom challenges. Beehive sessions are seeded with challenge topics, such as HMW provide personalized instruction for students? The Beehive structure is framed by an iterative design cycle, which builds in time for teachers to provide feedback and support for one another’s projects.

New Design High School has built brainstorming teams into their school structure. When asked about outcomes of experience David says, “Teachers learned that the group is more powerful than the individual mind. This was exciting to witness.”
Appendix

WHAT'S IN THIS SECTION

Getting Started Worksheets
Hello Designer!

Whether this is your first design project or your fiftieth, you are taking a brave step to address challenges in your classroom, school or community by designing new solutions that build from people’s needs and desires. Exciting!

This workbook is meant to help you structure your process and capture your thoughts. Use it how it best helps you... you can use some of the methods or all of the methods, it’s up to you.

First step... define your challenge and create a project plan.

WHAT’S IN THIS SECTION

0-1 Define a Challenge
0-2 Create a Project Plan
0-3 Create a Project Plan
**0-1 Define a Challenge**

**Dreams and Gripes Session**
Finding opportunities for design often begins by noticing problems. Sometimes it comes out as wishes (“I really wish our school had _____”) Sometimes it comes out as complaints (“It annoys me that we’re not _____”) Either starting point is fine. You might want to try this with a friend… share your dreams and gripes and ask them to reflect back design opportunities.

**DREAMS/THINGS I WISH WOULD EXIST**
I wish I could collaborate more with other teachers.

**GRIPES/THINGS THAT COULD BE BETTER**
Kids are so engaged on the computers but I don’t have enough.

Next, flip these statements into possible design challenges. Begin your question with “How might we…” or HMW for short. This turns the problems you see into opportunities for design!

**HOW MIGHT WE...**
**HMW... CREATE NEW TOOLS FOR TEACHERS TO COLLABORATE?**

**HMW... REDESIGN MY CLASSROOM TO BETTER MEET THE NEEDS OF MY STUDENTS?**
0-2 Create a Project Plan

Sketch out the End Goal(s)
What will we want to produce?

Define Indicators of Success
What measures and indicators will help me know my ideas are successful?

Establish Constraints
What constraints will we need to manage?

End Goals
- Prototypes I will try and build
- A Pilot Program
- A Vision Document that I’ll share with others
- A pitch presentation to enlist others in the idea

Constraints
- Needs to fit within my current school building
- Project budget of $50 dollars for the year
- Has to be ready to try when students return from break

Other Things to keep in mind
- Positive feedback from students
- My principal funds further development
- Other teachers want to join me
Write a Brief
Write up a short "brief" that clarifies the challenge you'd like to address. Write it as if you were handing it to someone else to design with. Capture thoughts on why this is a problem, and what the opportunity for design will be.

BRIEF

WITH THE ATTENTION SPANS OF STUDENTS DECREASING, AND INCREASING
COMPETITION WITH THE LATEST TECHNOLOGY, A 30 YEAR-OLD CLASSROOM,
AND MORE STUDENTS BEING ADDED TO THE CLASSROOM EVERY YEAR, THE
INCREASED CHAOS DOESN'T SERVE THE LEARNING EXPERIENCE. CLASSROOM
SET-UP STRONGLY INFLUENCES LEARNING BEHAVIORS, THERE IS A BIG
OPPORTUNITY TO REDESIGN MY CLASSROOM TO BETTER ADDRESS THE
NEEDS AND INTERESTS OF TODAY'S STUDENTS.
0–3 Create a Project Plan

The Design Thinking process is flexible and can integrate into your school structure and timing. The process can be run in a day, a week, a year, or more. What you put into the challenge determines what you get out of it. The depth of insight, opportunity areas, and level of concept refinement and impact will vary depending on the length of your project. For now, choose the timeline you’d like to begin working with. After getting started on the project, you may find that you’ll want to evolve this plan to meet the needs of your design solutions.

Circle your Design Plan

- In a Day
- In a Week or Two
- Spread out over Months

Sketch your Timeline

Create a timeline for your project. What are major dates you’ll be working toward? Do you need a prototype to be ready for use after summer break? Do you want to share learnings at parent-teacher night or pitch your concept to the school board? Consider deadlines, meetings, and interim check-in dates.

Project Checklist

What do you need to get in place to enable you to get started on this project? Do you need to align schedules to conduct a challenge on a professional development day? Do you need to book space or request materials? Who do you want help from?

CHECKLIST

- BOOK ROOM
- BORROW CAMERA

TO HELP ME WITH PLANNING, I WILL ENGAGE:

I WANT TO COMPLETE THE FIRST ITERATION OF THIS PROJECT BY:
ABOUT THE TOOLKIT:

At IDEO, we've been using similar processes, methods and tools for years in tackling some dauntingly complex challenges. More often than not, we've experienced how Design Thinking helps to get to the next step. That's why we are excited to see how it can impact the world of education. Teachers at Riverdale Country School are starting to use design process to address challenges in their classrooms and schools, and together we've created this toolkit in order to share these processes more broadly.

Riverdale

Riverdale Country School is a Pre-K through Grade 12 independent school in New York City.

www.riverdale.edu

IDEO

IDEO (pronounced “eye-dee-oh”) is an award-winning global design firm that takes a human-centered approach to helping organizations in the public and private sectors innovate and grow.
